

# Alkafibre

## Introducing Alkafibre<sup>®</sup>

Alkafibre is a unique product achieved by combining Oat feed pellets with Home n' Dry<sup>®</sup>. Its alkaline properties make it an ideal forage extender as well as an excellent rumen buffer while providing digestible fibre in the diet.

An alkalisated diet will support rumen health, animal health and performance ultimately driving profitability in any ruminant system.

Alkafibre is approximately 90% pelleted material and 10% shattered cereal.

### Alkafibre provides the following advantages:

- Better rumen stability enables more efficient digestion of feed.
- Enables increased levels of highly fermentable concentrates in the diet, reducing the risk of Sub Acute Ruminant Acidosis (SARA).
- Increased microbial protein from the rumen reduces need for costly bypass proteins.
- Cost effective use of Oat feed due to improved nutritional properties.
- Can be fed directly, as part of a TMR or with a compound / blend.
- Easy to handle and feed.
- Discourages vermin during storage.

### TYPICAL ANALYSIS OF ALKAFIBRE

	Alkafibre
Dry Matter %	83
Protein %	14.5
Fibre %	20
NDF %	44
Oil %	2.5
pH	8.5

*\*All figures are relating to a DM analysis.*

### TYPICAL INCLUSIONS OF ALKAFIBRE

	Alkafibre Effective % of DMI
Dairy Cows	10 – 30%
Beef Cows	10 – 30%
Calves	10 – 30%
Finishing Lambs	10 – 30%
